

Task 3: Dashboard Design

Objective: Design an interactive dashboard for business stakeholders.

Tools: Power BI / Tableau

Deliverables: Interactive Dashboard + PPT summary

Hints/Mini Guide:

- a. Choose right KPIs (Sales, Profit, Growth)
- b. Use slicers/filters for interactivity
- c. Include time-series analysis
- d. Add cards for totals/summary
- e. Apply consistent color theme
- f. Create navigation menu (if possible)

Dataset: Any Sales_Financial dataset (from kaggle)

Outcome: Learn how to create dashboards that inform business decisions..

Interview Questions:

- 1.What are the key elements of a dashboard?
- 2.What is a KPI?
- 3.What are slicers in Power BI?
- 4.Difference between Power BI and Tableau?
- 5.How do you make a dashboard interactive?
- 6.How do you deal with large datasets in dashboards?
- 7.What chart types do you use for trend analysis?

Task Submission Guidelines

- Time Window:

You can complete the task anytime between 10:00 AM to 10:00 PM on the given day. Submission link closes at

- Self-Research Allowed:

You are Debugfree to Yourself: explore, Google, or refer to tutorials to understand concepts and complete the task effectively. Try to resolve all errors by yourself. This helps you learn problem-solving and ensures you don't face the same issues in future tasks.

- No Paid Tools:

If the task involves any paid software/tools, do not purchase anything. Just learn the process or find free alternatives.

- GitHub Submission:

Create a new GitHub repository for each task.

Add everything you used for the task — code, datasets, screenshots (if any), and a short README.md explaining what you did.

Submit Here:

After completing the task, paste your GitHub repo link and submit it using the link below:
